Prologue

The paradigm of 'value' has shifted over the years to include both tangibles and intangibles. With Environmental, Social and Governance (ESG) considerations in evaluating business performance becoming mainstream, corporates worldwide are increasingly focusing on long-term resilience and relevance.

Integrated Reporting is one of the leading frameworks which has seen a growing adoption across the world, by facilitating a concise yet holistic approach to reporting. Much like their global counterparts, Indian corporates too are leaning towards the framework to demonstrate their ability to create, preserve and grow value for a diverse stakeholder base.

In this context, AICL Communications Ltd. (AICL) launched its #IndiaAdoptsIR publication series in early 2019. This, the second edition, builds on the research to gauge the scale of Integrated Reporting adoption in India while highlighting the best practices and providing recommendations for Indian companies to take their reporting to the next level.

We hope that this document serves as a handy guide for organisations to adopt Integrated Reporting in letter and spirit, and contribute more effectively to the improvement of reporting practices.

Foreword

Charles Tilley OBE

CEO, International Integrated Reporting Council (IIRC)

I am very encouraged to see in AICL Communications' #IndiaAdoptsIR publication that nearly 80 Indian companies are now voluntarily incorporating the International <IR> Framework into their business models and strategies.

Now more than ever integrated reporting is important for organisations' long-term success and sustainable development. The Covid-19 pandemic has led to businesses across the world prioritising the health and safety of their employees, customers and local communities over financial profit, radically changing their business models to evolve with these challenging times.

Businesses need to show their stakeholders that they create value and report on not just financial capital but also intellectual, environmental, manufactured and human capitals to name a few. The International <IR> Framework helps organisations to gain a holistic view of their business by providing a clear overview of all their capitals, which are more wide-ranging than environmental,

social and corporate governance factors. By being more transparent in their practices and culture, organisations gain the trust of their many different stakeholders, which in turn contributes to sustainable development and responsible capitalism.

I am very encouraged to see in AICL Communications' #IndiaAdoptsIR publication that nearly 80 Indian companies are now voluntarily incorporating the International <IR> Framework into their business models and strategies. Not only does this reflect the accelerating adoption of integrated reporting globally, but that India is making great strides in leading the way to sustainable value creation in South Asia.

Best regards,

Charles Tilley

63 Glossary

Foreword

Koushik Chatterjee

Executive Director and
Chief Financial Officer, Tata Steel

The purpose of the corporation is also getting redefined, from merely creating shareholder value to a much broader and inclusive theme of sustainable stakeholder value.

In recent years, the world has been experiencing a seismic shift in the geopolitical and economic balance, which is going to define the global agenda in the future. India will play an important role in this transition, and if foreign direct investments are an indicator, the record fund flows into India at the peak of the pandemic reinforce the country's attractiveness as an investment destination.

As investors worldwide decisively move towards sustainable value creation in harmony between capital, community and natural resources, 'impact investing' is gaining strong traction with capital finding its way into businesses having measurable impact on environmental, social and governance (ESG) issues.

The purpose of the corporation is also getting redefined, from merely creating shareholder value to a much broader and inclusive theme of sustainable stakeholder value. The issue of stakeholder value is now moving to the front and centre of the Board of the corporation as strategies, risks and opportunities and integration of capital to deployment becomes the key agenda.

As a developing country, India has the aspiration to become a 5 trillion dollar economy in the foreseeable future. However, this growth is also targeted to be inclusive and diverse to raise the quality of lives of the population, conserve and optimally use natural resources, deploy capital prudently and drive the climate agenda very strongly through technology, digital strategy and policy response. Therefore, as Indian companies grow in size and scale, the need to capture and communicate this sense of purpose and responsibility will be even more pronounced, with clear alignment with national and global priorities. In this context, the Integrated Reporting <IR> framework comes as a powerful vehicle for corporates to report their long-term resilience and relevance story to prospective and existing stakeholders.

While financial performance remains the bedrock of sustainability, the correlation between market performance, organisational priorities and ESG considerations is occupying centre-stage. In letter and spirit, the <IR> framework is uniquely positioned to establish linkage among these aspects and apprise the stakeholders holistically about the 'real value' being created.

05 Introduction

07 An introduction to
Integrated Reporting <IR>

16 Integrated Reporting <IR>
in India

21 Analysing Indian
Integrated Reports

62 Industry-wise best reports

63 Glossary

Foreword (Contd.)

The publication reflects the breadth and depth of Integrated Reporting in India ever since the market regulator SEBI called for voluntary adoption of the framework. This assumes even more significance with India's growing stature in the world order with demonstrated scale and capabilities, putting the spotlight on domestic corporates to align themselves with best-in-class global standards.

In India, Tata Steel was one of the very first companies to adopt the framework in 2016 with a view of communicating its sustained value creation through cyclical ebbs and flows to a diverse stakeholder base. Since then, our reporting practices have continuously evolved and have been received well by our investors and independent directors, and appreciated by the regulators and other bodies.

I am pleased to write this foreword for the second edition of #IndiaAdoptsIR. The publication reflects the breadth and depth of Integrated Reporting in India ever since the market regulator SEBI called for voluntary adoption of the framework. This assumes even

more significance with India's growing stature in the world order with demonstrated scale and capabilities, putting the spotlight on domestic corporates to align themselves with best-in-class global standards.

I congratulate AICL for putting together this first of its kind publication in India. I believe this will serve as a reliable guide for organisations in their integrated reporting journey.

Best regards,

Koushik Chatterjee

Introduction

Arvind Agrawal

Founder and CEO, AICL Communications

An outcome of AICL's rigorous in-house research, the publication in its second edition continues to provide insights into how Indian organisations are reporting 'value-creation' and how <IR> is playing a key role in achieving this.

We live in interesting times. While there is widespread uncertainty on the shape of the post-pandemic world, the capital markets seem to be on steroids. The decoupling of market performance with the shape of economic trajectory notwithstanding, there is increased convergence about the significance of this transient period for companies to reflect on their resilience and future strategy.

Today, businesses are being increasingly considered as social entities; responsible business conduct is under a massive spotlight. The symbiotic relationship between organisations and their stakeholders is thus more relevant today than ever before. As a result, stakeholder-centric communications have emerged as a priority for organisations globally.

Integrated Reporting <IR> has emerged as a true platform of consolidation, guiding organisations shift to a more unified and value-based reporting framework. The pace of adoption of the framework across the world stands as a testimony to its relevance. And the recent intent to merge the IIRC and the SASB is a decisive step towards streamlining global reporting frameworks. It is expected to lend further credibility to disclosures, clarity to performance indicators and enhance intra-industry comparability in reporting.

Reporting in India

There is a definite focus on India as a global investment destination. For investors and other stakeholders, effective disclosures play a significant role in augmenting trust and building better connect with an organisation.

In the past, while there had been significant on-ground actions taken by Indian corporates with regard to philanthropy, environmental practices and corporate governance, the strategic reporting of these elements had not witnessed a wide adoption. Companies did publish sustainability reports, but most of them contained largely historical information and less strategic and forward-looking disclosures. The articulation of how Environmental, Social and Governance (ESG) aspects dovetail into organisational value-creation also seemed lost in translation.

It is in this context that about four years ago integrated reporting made its first mark in India. What started with 2-3 companies soon became the preferred reporting framework for several of India's large corporates. Today, ~50% of Nifty50 companies have adopted integrated reporting, and from our standpoint, more are on the way. Equally fascinating is the fact that nearly 40% of Indian companies that have embraced

Nearly 40% of Indian companies that have embraced integrated reporting are in the <US\$ 1 billion market capitalisation bracket.

The total market capitalisation of companies adopting <IR> in India is approximately

US\$ 1 tn

integrated reporting are in the <US\$ 1 billion market capitalisation bracket. This signifies the ubiquitous application of integrated reporting and its increasing popularity among mid and small cap companies.

This scale and pace of adoption can be attributed to a few key drivers such as:

- A consistent regulatory thrust directed at more strategic and holistic reporting, including encouragement of Top 100 companies to voluntarily adopt Integrated Reporting <IR>
- The mainstreaming of Environmental, Social and Governance (ESG)
- Foreign and Indian investors seeking enhanced disclosures
- Independent Directors and Board members emphasising contemporary reporting
- The popularity of a 'single report' capturing all information for all stakeholders

#IndiaAdoptsIR in context

#IndiaAdoptsIR, a first-of-its-kind research publication in India, made its debut in 2019 with the aim to be a reliable guide for existing and future adopters, and all others interested in <IR>. An outcome of AICL's rigorous in-house research, the publication in its second edition continues to provide insights into how Indian organisations are reporting 'value-creation' and how <IR> is playing a key role in achieving this.

Acknowledgement

I congratulate my colleagues Akhil Anilkumar, Raj Mitra, Rahul Sureka, Suvarna Sohoni, Prasad Taware and Shitij Sharma for their efforts in making this research document a reality.

We hope that you find this guide to be useful and insightful. We look forward to your feedback and opinions at hello@aicl.in

Happy reporting!

Arvind Agrawal

An introduction to Integrated Reporting

Corporates globally are increasingly converging on their views about financial capital not being the sole driver of success. The interplay of both financial and non-financial capitals such as natural, intellectual, social and human enables an enterprise to grow and succeed.

These capitals are all interconnected and interdependent, implying that the inputs of one impact the outcomes of the others and vice-versa. Thus, to stay relevant in the long run and deliver sustainable financial returns, businesses need to look at value creation through the broader prism of stakeholder returns.

Integrated Reporting <IR> helps organisations overcome the limitations of traditional financial reporting in providing a holistic view of performance and progress. The International <IR> Framework is designed to also capture information and insights in the larger context of opportunities and risks.

Globally, more than 2,500 corporates in ~65 countries have adopted the International <IR> Framework. In India, over 80 companies have already transitioned into Integrated Reporting.

<IR> Guiding Principles*

Strategic focus and future orientation

An integrated report should provide insight into the organisation’s strategy, and how it relates to the organisation’s ability to create value in the short, medium and long term and to its use of and effects on the capitals.

Connectivity of information

An integrated report should show a holistic picture of the combination, interrelatedness and dependencies between the factors that affect the organisation’s ability to create value over time.

Stakeholder relationships

Into the nature and quality of the organisation’s relationships with its key stakeholders, including how and to what extent the organisation understands, takes into account and responds to their legitimate needs and interests.

Materiality

An integrated report should disclose information about matters that substantively affect the organisation’s ability to create value over the short, medium and long term.

Conciseness

An integrated report should be concise without being burdened with less relevant information.

Reliability and completeness

An integrated report should include all material matters, both positive and negative, in a balanced way and without material error.

Consistency and comparability

The information in an integrated report should be presented on a basis that is consistent over time and in a way that enables comparison with other organisations to the extent it is material to the organisation’s own ability to create value over time.

<IR> Content Elements*

An integrated report should answer the following questions across these content elements.

Organisational overview and external environment

What does the organisation do and what are the circumstances under which it operates?

Basis of preparation and presentation

How does the organisation determine what matters to include in the integrated report and how are such matters quantified or evaluated?

Strategy and resource allocation

Where does the organisation want to go and how does it intend to get there?

Risks and opportunities

What are the specific risks and opportunities that affect the organisation’s ability to create value over the short, medium and long term, and how is the organisation dealing with them?

General reporting guidance

Preparation of integrated reports should keep in mind the guidance on disclosures of material matters and capitals; time frames for short, medium and long terms; and aggregation and disaggregation of information as explained in the International <IR> Framework

Performance

To what extent has the organisation achieved its strategic objectives for the period and what are its outcomes in terms of effects on the capitals?

Outlook

What challenges and uncertainties is the organisation likely to encounter in pursuing its strategy, and what are the potential implications for its business model and future performance?

Governance

How does the organisation’s governance structure support its ability to create value in the short, medium and long term?

Business model

What is the organisation’s business model?

The changing 'value' paradigm (Contd.)

ESG investing gains significant traction globally

Investors today are keen to evaluate the long-term impact of exposures to ESG risks such as climate change, resource pressures, data privacy, demographic shifts, regulatory pressures and most recently, pandemic. Further, there is a visible correlation between a company's ESG focus, its market performance and financial returns.

In this context, ESG parameters are playing a key role in investment decisions. It is evidenced by a large-scale flight of capital to more responsible and long-term focused investment opportunities.

Resulting in the need to align ESG parameters with performance reporting

ESG investing is becoming the zeitgeist of today's capital markets. However, in a bid to integrate ESG into stakeholder communications, at least a dozen frameworks have emerged with varying abilities to capture information. This proliferation has stymied comparability and consistency in reporting.

Integrated Reporting assumes significance in this context, as a holistic framework that lays down clear guiding principles and content elements, prepared with the objective of ensuring

US\$ 71.1 bn

In India, Nifty100 ESG index has outperformed Nifty100 since 2014

(Source: National Stock Exchange)

comparability between reports and consistency in reporting.

What makes Integrated Reporting truly unique is its ability to accommodate disclosures required by other standards, frameworks and goals. It enables companies to publish a single report with comprehensive disclosures, mapped to different external reporting frameworks. An integrated report can also present and highlight information sought by ESG rating agencies (such as DJSI¹, MSCI², Sustainalytics) etc.

88%

Investor respondents in a recent EY survey confirmed integrated reports to be very useful sources of non-financial information

Integrated Reporting <IR> in India

"Today, investors are moving towards companies which have a high Environmental, Social & Governance score. India already has systems and companies which rank high on this. India believes in following the path of growth with equal focus on ESG."

Shri Narendra Modi
Honourable Prime Minister of India*

India is one of the most attractive investment destinations. As Indian companies seek top-tier global capital and high-quality investors, there is a greater need for transparency and benchmarked reporting for both financial and non-financial performance.

In this context, Integrated Reporting has emerged as an important tool for communicating the holistic value creation process factoring in all capitals. Encouraged by India's market regulator Securities and Exchange Board of India (SEBI) to voluntarily adopt the <IR> Framework, many Indian companies are using it to tell a more cohesive story of purpose and performance.

Analysing Indian Integrated Reports

In 2020, various Indian companies across sectors and sizes chose to report using the International <IR> Framework. This section aims to analyse the reports published in both qualitative and quantitative terms and present the best case examples that may be used as benchmarks for each aspect of <IR>.

Methodology

Our coverage universe comprises reports of BSE 500 constituents (as on September 30, 2020). The analysis was conducted with the objective of understanding the trajectory of <IR> adoption in India, and assessing relevant indicators.

We also reviewed the quality of Integrated Reporting <IR> in India, by scoring the reports on 50+ parameters across various aspects of the <IR> Framework. We also listed the top scorers on each aspect, outlining the positives and identifying the improvement areas. The industry-wise best reports arising from this analysis are provided on Page 62.

Evaluating an integrated report

A well-structured integrated report is characterised by 13 key aspects that truly reflect the content elements and guiding principles of the International <IR> Framework.

1/ Basis of presentation

Pg 23-25

2/ Profile of the organisation

Pg 26-28

3/ Purpose

Pg 29-31

4/ External environment

Pg 32-34

5/ Materiality

Pg 35-37

6/ Stakeholder engagement

Pg 38-40

7/ Strategy and capital allocation

Pg 41-43

8/ Capitals

Pg 44-46

9/ Value creation model

Pg 47-49

10/ Performance

Pg 50-52

11/ Risks and opportunities

Pg 53-55

12/ Governance

Pg 56-58

13/ Interconnectivity

Pg 59-61

02 Foreword

 22 **Evaluating an Integrated Report**

62 Industry-wise best reports

63 Glossary

1/ Basis of presentation

Basis of presentation, or ‘About This Report’ is commonly presented at the very start of the report to communicate the report’s scope and boundary, frameworks used in its preparation, materiality process and internal and external assurances.

This aspect can be achieved by featuring the following elements:

- Referencing the usage of the International <IR> Framework in the report
- Defining the materiality determination process*, reporting scope and boundary of the report
- Referencing multiple frameworks and guidelines such as the Global Reporting Initiative (GRI), the Sustainable Development Goals (SDGs), Task Force of Climate-related Financial Disclosures (TCFD), etc.
- Identifying the audience for the report
- Assuring/undertaking the responsibility of the integrity of the report by those charged with governance

We recommend

- Use basis of presentation as a tool to outline the background of the organisation’s reporting process
- Links to other official publications of the company, such as separate annual reports, sustainability reports and presentations can be provided to lead the readers to gain a holistic perspective
- A legend can be included mapping all the icons and indicators used within the report to aid navigation
- Signatures of board members or key managerial personnel, along with the responsibility statement can be given, to emphasise responsibility for the report

Trends from BSE 500 companies

59	29
Companies referenced the IIRC and the <IR> Framework in their report	Mapped other leading frameworks to their disclosures
54	27
Defined their reporting scope and boundary	Included a third-party assurance for their report

2/ Profile of the organisation

The profile of the organisation is generally presented as 'Corporate Overview' or as 'At a Glance'. It provides a broad introduction, scale and capacity, credos, presence and offerings, among others.

This aspect can be achieved by featuring the following elements:

- Showcasing what the organisation does, where does it operate and what are its products and services
- Communicating the organisation's credos – Vision, Mission and Values
- Presenting the external environment and megatrends and the organisation's response to them

We recommend

- Capturing the most important highlights that reflect the Company's true character
- Using the section as an effective tool to present the change in an organisation's general outlook, e.g., transformation from a B2B business to a B2C business
- Cross-referencing other sections with the overview to guide readers looking for more detailed discussions on offerings, strategy, performance, etc.

3/ Purpose

Purpose explains an organisation's *raison d'être*, and is a key driver to organisational value creation. Increasingly, organisational purpose statements are becoming voices of the impact companies strive to create and the larger value they seek to deliver. The rise of purpose also mandates the need for companies to consider multiple capitals and non-financial indicators in their business conduct and reporting.

This aspect can be achieved by featuring the following elements:

- Presenting the Company's purpose statement
- Linking the organisation's approach to value-creation to its purpose
- Discussing corporate strategy under the larger ambit of purpose, outlining how strategic focus areas will help the company achieve its purpose

We recommend

- Basing reporting on the core theme of purpose, creating an anchor around which the organisational value-creation story revolves
- Presenting key stories, along with quantitative indicators to showcase alignment with purpose

Trends from BSE 500 companies

4/ External environment

The external environment defines the circumstances in which the organisation functions, including the trends shaping its industry.

This aspect can be achieved by featuring the following elements:

- Discussing the aspects of external environment
- Presenting the megatrends shaping the industry or the economy
- The organisation's response to key developments and trends

We recommend

- Providing a comprehensive view of the market dynamics under which an organisation operates
- Showcasing the organisation's awareness of its fast-paced environment and preparedness to adapt and change

5/
Materiality

Traditionally, materiality principle was used in financial reporting to handpick and present relevant information that can aid in shareholder decision-making. Similarly, core sustainability issues were mapped in GRI-based reports. in an integrated report, however, the focus is on issues that can substantively affect the ability of the organisation to create value over time.

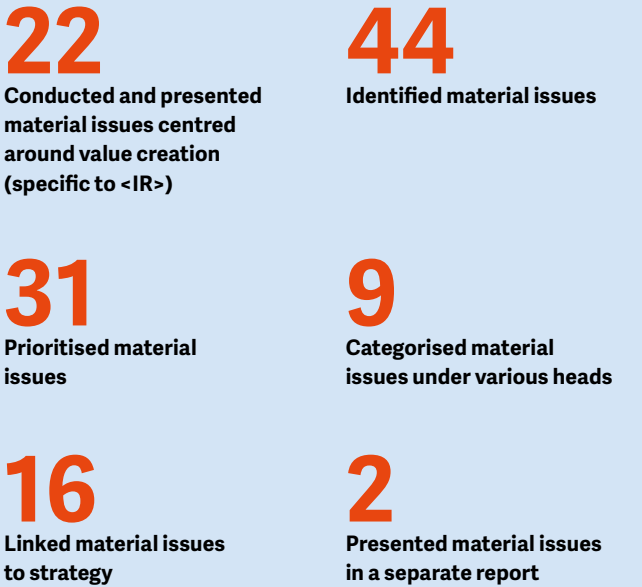

This aspect can be achieved by featuring the following elements:

- Providing a summary of materiality determination process
- Indicating how material issues are prioritised and presenting the most material issues affecting value-creation abilities
- Showing material issues and their linkages with strategy, risks and opportunities and business model
- Outlining all issues that can have a material impact, as opposed to only ESG issues (similar to GRI-based reporting)

We recommend

- Plotting issues according to ‘importance to the organisation’ and ‘importance to stakeholders’ as a starting point for prioritising ESG-related issues
- Focusing on issues having a material bearing on the organisation’s value-creation process
- Linking the material issues with the risks and opportunities to explain the temporal nature of those issues

Integrated Report 2019

6/ Stakeholder relationships and engagement

As part of regular business activities, an organisation interacts with several stakeholder groups, including financial capital providers, suppliers, customers, regulators and communities. Value-creation ability of an organisation is closely associated with its ability to identify and address the legitimate needs and requirements of these stakeholder groups.

This aspect can be achieved by featuring the following elements:

- Communicating the organisation's understanding of stakeholders' requirements and needs
- Showing the various platforms and means through which the organisation engages with different stakeholder groups
- Mentioning the organisation's response to stakeholders' demands and concerns

We recommend

- Listing the key stakeholders, their concerns and engagement methods
- Highlighting the material issues that are closely linked with the respective stakeholder groups
- Demonstrating how the organisation responds or plans to respond to the concerns of stakeholder groups

Trends from BSE 500 companies

7/

Strategy and capital allocation

How is the organisation moving towards realising its vision? What factors influence strategy formulation? How is the value-creation process, the performance and resource allocation aligned to the strategic framework of the organisation? These are the fundamental questions answered by this aspect.

This aspect can be achieved by featuring the following elements:

- Explaining the organisation's strategic framework and objectives over short, medium and long terms
- Laying down an action plan, including capital allocation, to achieve the strategic objectives
- Involving ESG as a core facet of the strategic framework, and embedding sustainability as a strategic priority
- Linking performance to the strategic objectives
Providing the organisation's near- and long-term outlook

We recommend

- Using capital linkages to indicate resource allocation
- Presenting announced capex plan and value to be created across financial and non-financial parameters
- Identifying a set of KPIs that can be tracked year-on-year and reporting on the same, with a short note explaining the relevance of the KPIs and the rationale for the performance level

8/ Capitals

Multi-capital thinking is the very heart of integrated thought process. The capitals, namely Financial, Manufactured, Intellectual, Human, Social & Relationship and Natural are resources and relationships the organisation draws from and impacts while creating and enhancing value.

This aspect can be achieved by featuring the following elements:

- Identify and define the capitals the organisation depends upon and considers most material for value creation.
- Explaining trade-offs between different capitals. Capital trade-offs can be between:
 - Different capitals or between components of capitals
 - Impact of capitals over time
 - Capitals owned and not owned by the organisation

We recommend

- Providing clear quantitative indicators supporting qualitative capital definitions
- Reframing/adding/subtracting capitals based on the nature of business, using the six capitals indicated by the <IR> Framework as a base
- Using trade-offs to explain business decisions, linking them to material issues and their prioritisation

Trends from BSE 500 companies

65

Defined their capitals

2

Used capitals other than the standard six specified

47

Supported capital definitions with data points

35

Provided capital trade-offs and/or strategy linkages

9/ Value-creation model

The value a company creates either for the business or for its stakeholders in the short, medium or long term forms the basis of its purpose. It is important for the stakeholders to be aware of the entirety of the organisation's inputs, value-creation process, business outputs and outcomes for different capital components.

This aspect can be achieved by featuring the following elements:

- Factoring in all the capitals defined by the organisation in the business model
- Mapping all the activities undertaken by the organisation to produce goods and services
- Listing out the output of business activities, using defined metrics
- Highlighting the outcomes by capitals
- Integrating the operating context in the value-creation model, and embedding the organisational vision and mission
- Linking the business model with strategy and resource allocation, risks and opportunities, performance and outlook

We recommend

- Keeping the 'Octopus Model' prescribed in the <IR> Framework as a base and customising it to the organisation
- Categorising inputs and outcomes under different capitals
- Providing both quantitative and qualitative outcomes
- Providing cross-referencing to various sections from the value-creation model

Note: Outputs denote products, services, by-products and waste generated by an organisation's activities. Hence, they do not require a capital-wise classification.

Trends from BSE 500 companies

64

Followed the IIRC's suggested business model framework

26

Cross-linked aspects of the business model to other sections

45

10/ Performance

An integrated report should convey the extent to which the organisation has achieved its strategic objectives for the reporting period and what are the outcomes in terms of effects on the capitals.

This aspect can be achieved by featuring the following elements:

- Mapping KPIs to strategic focus areas
- Presenting both financial and non-financial KPIs
- Showcasing performance across past years (three or more immediately preceding years is a good thumb rule)
- Ensuring capture of both positive and negative performance
- Complementing quantitative disclosures with a qualitative explanation

Examples of KPIs

- **Financial:** Revenue, EBITDA, PAT, debt to equity ratio, debt to EBITDA ratio, free cash flow, ROCE
- **Operational:** Goods produced, efficiency, throughput, sales, plant availability, profitability per unit of product

- **Environmental:** Emissions, wastewater recycled, energy mix and usage
- **Social:** CSR expenditure, customer satisfaction score, gender diversity, age diversity, training hours per employee, Lost Time Injury Frequency Rate (LTIFR)
- **Governance:** Number of independent directors and women directors, stakeholder complaints received vis-à-vis resolved, ESG scores/ratings from third parties

We recommend

- Providing an industry benchmark for every KPI, enabling better comparability and improved performance disclosures
- Presenting performance highlights upfront in the report

Trends from BSE 500 companies

16	51
Identified KPIs under each strategic focus area	Provided comparable KPI data for three or more preceding years
50	20
Provided non-financial KPIs	Discussed the rationale for the performance
22	25
Used GRI-linked KPIs	Presented both positive and negative performance

11/
Risks and opportunities

An integrated report identifies the key risks and opportunities that are specific to the organisation and its ability to create value. It also identifies the organisation’s ability and strategy to mitigate the risks and capitalise on the opportunities.

This aspect can be achieved by featuring the following elements:

- Identifying the key risks and opportunities an organisation faces or is expected to encounter in the short, medium and long terms
- Assessing the probability of occurrence of various risks and opportunities
- Communicating an action plan to mitigate the risks or capitalise on the opportunities
- Indicating risk movement over the reporting periods
- Presenting the risk management framework

We recommend

- Discussing both internal and external risks
- Cross-linking risks with the external environment and strategy disclosures
- Indicating which capitals are expected to be impacted due to the risk
- Maintaining materiality as an important aspect while identifying risks and potential impact

- 63 Glossary

12/ Governance

An integrated report explains how the organisation's governance structure supports its ability to create value in the short, medium and long term.

This aspect can be achieved by featuring the following elements:

- Outlining 'Those Charged With Governance' (TCWG) for the organisation, the organisation's leadership structure and the overall governance framework
- Explaining the role TCWG plays in giving strategic direction or in creating and conserving value
- Diversity of the board in terms of gender, experience, independence, background or on any other parameter
- Relevance of each director on the board and the value they add to the organisation
- Board's stance in mainstreaming ESG in the organisation's operations

We recommend

- Summarising committee memberships and key decisions taken during committee meetings to define the responsibility and ownership of each member
- Referencing how governance parameters are linked with the compensation of TCWG to convey organisational commitment to good governance

Trends from BSE 500 companies

31
Illustrated their governance framework

14
Discussed key Board decisions

20
Presented their Board/TCWG diversity across facets

62
Presented profile of the Board and relevance of appointment

26
Discussed key corporate behaviour issues such as human rights and ethics

13/ Interconnectivity

An integrated report becomes truly integrated when its content elements interact with each other to present a cohesive narrative. No content element of an integrated report is sufficient in its own capacity to present the entire value-creation story, if not interconnected with the relevant sections of the report.

This aspect can be achieved by featuring the following elements:

- Cross-referencing content elements, specifically external environment, materiality, strategic priorities, value-creation model, performance and risks
- Discussing both quantitative and qualitative disclosures
- Disclosing both financial and non-financial information
- Interlinking information within the integrated report, information within the organisation's other communications and information from any other reliable sources
- Presenting information over periods of time

We recommend

- Linking existing information from statutory reports such as Board's Report, Management Discussion and Analysis, Corporate Governance Report, Business Responsibility Report and Financial Statements
- Using materiality and identified issues as the base for interconnecting all information
- Using page referencing and icons to aid the reader in navigating the interconnectivities

Trends from BSE 500 companies

56

Effectively used cross-referencing to connect information spread through the report

27

Linked external disclosures for the reader to access

53

Used graphic devices/icons to indicate cross-linkages in the report
